UVM - Simple Architecture w/ Single Agent

Package Definition/Organization

Introduction

- UVM organizes all of its **base classes** into a SystemVerilog Package.
- **Code** that is written *extending from* the UVM **base classes** should also be placed into packages in a **specific hierarchy**.
- The organization of **this hierarchy** makes it easier to
 1. compile smaller pieces of a testbench at once and in order
 2. and prevents circular references.

Interface

DUT

```
package sfifo_agent_pkg;  
  
  `include "uvm_macros.svh"  
  
  import uvm_pkg::*;  
  
  //Include the sequence_items (transactions)  
  `include "sfifo_seq_item.sv"  
  
  `include "sfifo_sequence.sv"  
  `include "sfifo_sequencer.sv"  
  `include "sfifo_driver.sv"  
  `include "sfifo_monitor.sv"  
  
  `include "sfifo_agent.sv"  
  
endpackage
```

Environment Package

```
package sfifo_env_pkg;  
  
import uvm_pkg::*;  
import sfifo_agent_pkg::*;  
`include "uvm_macros.svh"  
  
// include top env files  
`include "sfifo_scoreboard.sv"  
`include "sfifo_coverage.sv"  
`include "sfifo_env.sv"  
  
endpackage
```

Sequence Package
